

Brad Stevenson

Technical Artist / Creative Technologist — Tools & Pipelines

Chicago, IL • bradjste@gmail.com • bradjste.com • GitHub and reel available on request

SUMMARY

Creative technologist and engineer with 9+ years building tools and interfaces for people who make visual work. Deep experience in real-time 3D, keyframed and physics-based animation, and reusable libraries that other engineers build on. I sit with designers and artists, turn their feedback into shipped tooling, and document it so it stays usable.

CORE SKILLS

Tooling & Pipelines: Python, Node.js, reusable code libraries and internal APIs, CLI and batch scripting, asset build pipelines, CI/CD, Docker, dependency and version upgrades, documentation

Tool UI: Angular, React, Vue, TypeScript, component and widget libraries, state management, data-dense panels and editors built for non-engineers

Real-Time 3D & Animation: three.js, React Three Fiber, WebGL and GLSL shaders, Unity, skeletal rigs and skinning, keyframe curves and tangents, overlap and squash-and-stretch, procedural and generative systems, D3.js

Prototyping & Interactive: Creative coding, rapid prototyping, game jams, TouchDesigner, Processing, p5.js, projection mapping, sensors and Arduino, OpenCV, Kinect

PROFESSIONAL EXPERIENCE

NVIDIA — Software Engineer / Consultant

May 2021 – May 2026 | Chicago, IL — Staff Front-End & Full-Stack Engineering Lead

- Built and maintained **reusable component, service, and state-management libraries** that other engineers across multiple teams developed against — API surface, conventions, and documentation — after architecting the Angular front end they sit in.
- Served as the **go-to partner for designers** on motion, interaction, and visual polish — parsing feedback into actionable tickets and turning prototypes into production behavior.
- Designed custom **D3.js visualizations** for high-volume sensor data, cutting equipment diagnosis time.
- Owned **build and deployment pipelines** (containerization, CI/CD) and shepherded framework and dependency upgrades with minimal disruption mid-project.
- Mentored junior engineers and handled day-to-day support requests against the shared libraries.

ONE Network Enterprises — Full-Stack Software Engineer

May 2019 – May 2021 | Dallas, TX

- Built full-stack features with **Python**, Java, SQL, and JavaScript for mission-critical supply chain applications supporting the U.S. Department of Defense.
- Partnered directly with Air Force stakeholders to iteratively deliver dashboards and visualizations, improving operational situational awareness.

CutMod Digital Media — Junior Creative Technologist

April 2018 – April 2019 | Los Angeles, CA

- Designed, prototyped, and delivered large-scale **interactive installations** combining real-time graphics, projection mapping, sensors, and custom software.
- Built XR and experiential experiences in **Unity** with Kinect, OpenCV, Processing, Arduino, and custom hardware.

INDEPENDENT WORK

May 2026 – Present | Chicago, IL

- Building **Skimboard**, a WebGPU-native audio synthesis library in JavaScript, with synthesis in WGSL compute shaders and a public API for other developers.
- Rigging and animation studies in three.js and React Three Fiber: skinned joint chains, keyframe curves with switchable tangent modes, overlap, and squash and stretch — wrapped in an artist-facing control panel.
- Physics-driven locomotion prototypes in Unity; graphics work in signed distance fields, ray marching, and rasterizer internals.

EDUCATION

University of California, San Diego — B.A. Interdisciplinary Computing & the Arts | 2013 – 2017

CERTIFICATIONS

- **Three.js Journey** — WebGL, 3D rendering, shaders, lighting and materials, cameras, interactive animation
- **Google Cloud Associate Cloud Engineer** — Cloud-native architecture, IAM, networking, compute, monitoring, CI/CD
